

Notes 1

What is Markdown?

Markdown is a **markup language** (text-encoding system) that allows users to write simple texts along simple formatting resources. It converts plain text to various document types like, *HTML*, *PDF*, *Docx* and *Ppx*.

What is Git?

Git is the most popular version control system in the world. A version system records the changes to our codes over time in a special database called **repository**.

What is GitHub?

Github is a *Git-built on* program hosted on the cloud/web. It allows users to store, manage, and share code. It enables real-time collaborative software development and open-source projects.

What is slack?

Slack is a **organized texting** platform that focuses on workplace communication. It is organized by channels, pretty much like *Discord*, integrating tools and various features.
